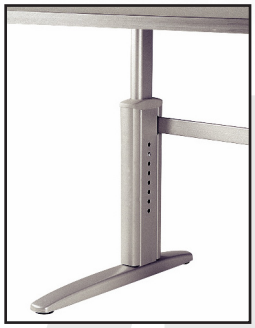
Fixed Height Desk

One table with four leg configurations is a **well-designed** line of desking. Multiply it by 27" of height adjustability; add privacy screens and overheads and the product is T4. Divide this **comprehensive system** by its price to arrive at your office furniture solution.

The foundation of T4 is a 29" fixed height table with a steel leg assembly that is the essence of **durability and simplicity** of design. Its simplicity doesn't limit its applications, however. The unobtrusive leg and foot anchor work surface shapes from the cockpit to the conference



Pin Height Adjustable

The pin height adjustable table takes the T4 base to the next level. Telescoping legs with spring steel buttons allow you to set the surface height from 24-31" in one-inch increments. Nylon bushings ensure that the legs will **glide smoothly** whether you adjust them once, once in a while, or once a day.

Crank Height Adjustable

In an era of job-sharing, you may not be the only one your desk needs to accommodate. That's where the crank adjustable table comes in. Because it relies on a worksurface-mounted mechanical crank, this table can be adjusted uniformly from 22-33" or 27-43" in a sit/stand version, even under load. And because this table is **continuously adjustable** across its range, you can find your **perfect fit.**

Electrically Adjustable

For the **easiest adjustment** over the **greatest range,** T4 also boasts an electrically adjustable table. Standard table controls regulate the height from 24-51" with the push of a button, while an optional deluxe controller also contains a digital height display and stores up to three presets.

Fixed height and adjustable tables can also be combined in a single workstation to create a sit-stand environment that will allow you to **comfortably accomplish tasks** from both a standing and seated position.

Volition
Desking System

All freestanding office furniture blends the **accessibility** of traditional desking with the **efficiency** of panel-based systems, but it takes Volition to create a workspace that is uniquely yours.

With its simple profile, the core of the Volition system sets itself apart by fitting in. When building a design from the ground up, this provides a backbone for options like **privacy screens** and **modesty panels** to create **visual impact**. However, when incorporating new furniture into an existing layout, it allows the desking to blend **seamlessly** with other furniture lines.

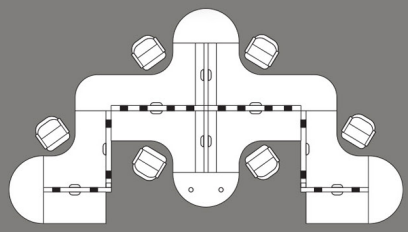
On Worksurface Mounted Screens
Visually divides two stations at the edge of a worksurface.

System XXI

Systems Furniture

Clear or tempered glass brings natural light and an open ambience that's acoustically sound.

Mobile conference tables can stand alone or may be used to extend end panels, allowing for impromptu meetings and conferences.



Enduring Quality

System XXI has been a workplace solution for decades with good reason. Constructed of fully welded steel frames and purposefully engineered layers, System XXI has provided quality workspace solutions for countless individuals. It's a straightforward, **hassle-free** solution—easy to order, install, and reconfigure.

Quiet, Please!

In a world of distractions, a quiet place to focus is critical to productivity. System XXI was designed from the inside-out to **reduce ambient noise** and minimize interruptions. Tall panels with optional doors provide needed privacy for individual work, while multi-layered acoustic fabric panels **absorb sound** like no other system.

Simple but Efficient

System XXI panels arrive fully assembled for quick **on-site installation** with minimal tools, saving up to thirty percent of installation costs compared to other panel systems. Its thinner profile and minimal joints make the most of small footprints, providing space efficiency as well.

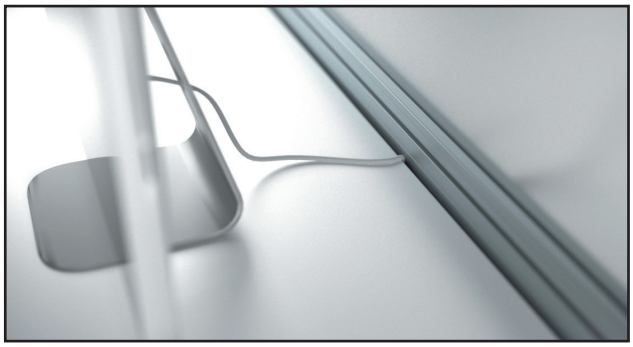
Focus in Style

All benching designs begin with a charge to create furniture that encourages both team and individual productivity as efficiently as possible. StyleLinks answers the call uniquely by offering a floating top, simple leg design, and multitasking features throughout.

It all starts at the steel frame. Single- and dualsided conformations provide each user with a 24" or 30" deep workstation. Combinations of starter, adder, and perpendicular frame sections can be used to construct long runs of benching or wrap-around command centers with equal **ease.** The telescoping beams within those frames make dramatic reconfigurations more **affordable** as each frame can accommodate a range of worksurface sizes.

Let VCE's designers help plan your office panel system to fit your vision and budget.

Storage Options -
include mobile pedestals and a variety of credenzas, providing ample room for personal items.



Cable Management -
can be as easy as sliding out the worksurface and running cords in the revealed trough.

Tool Rail -
makes privacy screens multi-functional by letting you mount lighting or accessories on them.

From simple installation and a **flexible** platform that makes it **easy** to change direction as needed, to **exceptional durability** and generous raceways for your power, data or communications, Divi is designed to grow with you.

Plus, it's a system you can feel good about. Made with recycled material and using an environmentally friendly manufacturing process, Divi is also one of the most **affordable** system solutions in the industry.
